It is marketed by Autodesk (formerly EAGLE Corporation) and delivered as a desktop or server version. It provides the following features: Maps can be used to define areas and generate a Google map showing the area on a world map. 3D models can be added to map areas or entire cities. Various algorithms and tools can be used to create the map. Various layers of the 3D models can be used including orthographic and oblique. Model-based infrastructure planning and management Autodesk Map 3D may be used to plan and manage the layout of an infrastructure within a geographic area. It uses object-based and area-based analysis to find potential locations for buildings, roads, and water. Model-based infrastructure planning (MBI) takes a geographic area and identifies locations of existing objects such as roads, buildings, and schools, then combines those with the potential locations to create new streets, building spaces, and schools to allow them to be built using the most optimal routes. The technique has been applied to the design of industrial parks, employment centers, shopping areas, etc. References Further reading Category:Computer-aided design software Category:Mapping software Category:Geographic information systems

Earlier this year, Syracuse University researchers and their colleagues released a study that showed children who are exposed to violence as infants and toddlers are more likely to have head injuries, as well as a host of other injuries, at later ages. The study concluded that early aggressive interactions between children in the home can be a risk factor for later head injuries in infants and toddlers. While violent, hypothermia-induced traumatic brain injury cases are relatively rare, they can have serious long-term consequences, and recent research from Syracuse University suggests that similar physical assaults may also be a significant factor in other, more common cases of head injury. Although children who are physically assaulted are by far the most likely to suffer brain damage, experts say hypothermia-induced traumatic brain
